With: Alexi Quintana and Hanyu Chwe (Northeastern University)

From May 16 to 31 we conducted the third wave of a large, 50 state survey, results of which are presented in this report. This is the fourth report published by the consortium. You can find previous reports online at www.covidstates.org.

Note on methods:

We surveyed 18,132 individuals across all 50 states plus the District of Columbia. The survey was conducted on 16-31 May 2020 by PureSpectrum via an online, nonprobability sample, with state-level representative quotas for race/ethnicity, age, and gender. In addition to balancing on these dimensions, we reweighted our data using demographic characteristics.

Note that a number of states in the data, including Alaska, Connecticut, Idaho, Kansas, Mississippi, Montana, Nebraska, New Mexico, North Dakota, Rhode Island, South Dakota, Vermont, West Virginia, Wyoming, as well as D.C., have relatively smaller sample sizes (under 250 respondents) and larger margins of error. Results concerning those states are marked with an asterisk (*) throughout the report and should be interpreted with caution.

1. Reopening the economy

Even as all 50 states continue to move towards full reopening, **Americans remain more cautious than their governors**. Only 15% of survey respondents say that the country should be reopened for business right away, a 4 percentage point increase from the response to that question in early May. More than half of those polled (57%) are in favor of waiting at least a month or more before resuming business activity.

Partisan differences in respondent attitudes towards reopening the U.S. economy

When should the country reopen the economy and resume business activity?

National sample, N1 = 19,505 (4/16/2020-4/30/2020), N2 = 20,333 (5/2/2020-5/15/2020), N3 = 18,132 (5/16/2020-5/31/2020)

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org

• Created with Datawrapper

Partisan differences in attitudes towards reopening continue to grow, with 30% of Republicans now in favor of immediate reopening compared to 4% of Democrats. That represents an increase of over 20 percentage points for Republicans over the last month, compared to only a 2 percentage point increase for Democrats during the same period.

Americans who think that the economy should reopen right away

When should the country reopen the economy and resume business activity?
[Percent respondents who say the economy should reopen immediately]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org

• Created with Datawrapper

The residents of six states — Massachusetts, New York, Rhode Island*, New Jersey, New Hampshire, and Maryland — are especially reluctant to reopen right away, with 10% or fewer of respondents in those states in favor of immediate reopening. At the other end of the spectrum, a quarter or more of the respondents in Idaho*, Montana*, Alaska* and Wyoming* say that the country should reopen immediately. The states with largest shifts in attitude towards immediate reopening are Alaska*, Wyoming*, South Dakota*, Oklahoma, Ohio, and New Mexico*, with an increase in support of 15 percentage points or more over the last month.

Public response to the reopening of the country

How soon after your state government lifts stay-at-home restrictions and permits businesses to open would you...

■ Immediately
 ■ One to two weeks
 ■ Two weeks to one month
 ■ More than one month
 ■ Will try to avoid these businesses as long as possible
 ■ Depends

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Even if states are formally reopened, resuming economic activity is largely up to their residents. Our results show that many Americans are not ready to go back to business as usual. **Almost a third of our respondents (31%) say that they would avoid going to restaurants for as long as possible, even after stay-at-home restrictions are lifted.** About 26% say they would dine out within two weeks of reopening, while 17% would wait more than a month. Over half of the survey participants (53%) suggest that they would stay away from public transportation for as long as possible, and close to a quarter (23%) say they would avoid going to retail stores.

The residents of Alaska*, Idaho*, Montana*, Nevada, and North Dakota* have the highest percentages of people willing to resume some activities outside the home, with, for instance, 20% or more of respondents in each of those states saying they would go to a restaurant right away after restrictions were lifted. Conversely, we found the highest proportion of people willing to stay away from restaurants indefinitely (over 35%) in Texas, Rhode Island*, Nebraska*, Maryland, Minnesota, New Hampshire, and South Carolina.

Many Americans will wait as long as possible before going to a restaurant even after states reopen for business

How soon after your state government lifts stay-at-home restrictions and permits businesses to open would you go to a dine-in restaurant?

[Percent respondents who say they would try to avoid these businesses as long as possible]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

• Created with Datawrapper

2. Following health guidelines

An overwhelming majority of Americans continue to follow basic health guidelines, with over 90% adhering to rules about washing hands and avoiding crowds “somewhat” or “very” closely. While our survey finds small declines (5 percent points or less) in the proportions of Americans who follow all other guidelines, the numbers are going up for people wearing face masks when outside of their homes.

We found a 10 percentage point increase from late April to late May of respondents who report following mask-wearing guidelines “somewhat closely” or “very closely” (73% to 83%). At the same time, people also report being more active outside their homes. In late May, 12% of respondents indicate that they did not leave their homes during the 24 hours before taking our survey, compared to 16% who reported the same a month earlier.

While adherence to other guidelines declines, the number of Americans who report wearing face masks is increasing

In the last week, how closely did you personally follow the health recommendations listed below?
[Percent respondents who say "somewhat closely" or "very closely"]

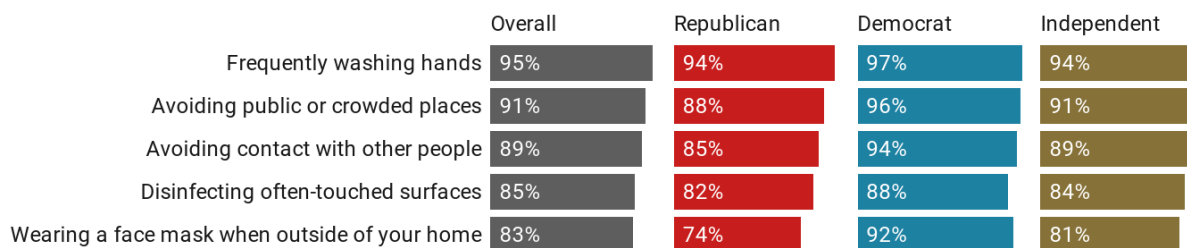

National sample, N1 = 19,505 (4/16/2020-4/30/2020), N2 = 20,333 (5/2/2020-5/15/2020), N3 = 18,132 (5/16/2020-5/31/2020)

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
• Created with Datawrapper

Compared to Republicans, **Democrats in the survey are more likely to say they follow health guidelines "somewhat" or "very" closely.** The partisan gap in reported behavior is especially high with regard to wearing a face mask. Overall, 18 percentage points more Democrats than Republicans report following face mask guidelines. The partisan gap is 9 points for "avoiding contact with other people", and 8 points for "avoiding public or crowded places".

Partisanship and adherence to health guidelines

In the last week, how closely did you personally follow the health recommendations listed below?
[Percent respondents who said "somewhat closely" or "very closely"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
• Created with Datawrapper

There is a large variation in the adherence to guidelines across states. The proportion of those polled who say they follow guidelines about wearing masks "very closely" is especially high (over 80%) in Rhode Island*, Massachusetts, Delaware, and New York. Conversely, it is especially low (40% or lower) in Montana*, Idaho*, North Dakota*, and Wyoming*. Those five states have also experienced among the lowest per capita COVID-19 cases according to the [Centers for Disease Control and Prevention](https://www.cdc.gov).

Wearing a face mask across the United States

In the last week, how closely did you personally follow the health recommendations listed below?
- Wearing a face mask when outside of your home
[Percent respondents who answered "Very closely"]

• Created with Datawrapper

3. Personal and economic impact

Most concerns that Americans report about the health and economic consequences of the pandemic remain within 2-3 percentage points of their levels from a month ago. The one exception is the **concern over being able to receive healthcare, which dropped by 6 percentage points during that time period**. The top concern among respondents in late May is still the possibility that family members could get COVID-19, with 76% saying they are "somewhat" or "very" concerned about that risk, notably higher than the 63% who are similarly worried about their own health. The next most salient concern on people's minds is economic, with 62% of respondents reporting they are apprehensive about financial hardships.

Personal and economic concerns about the COVID-19 pandemic

How concerned, if at all, do you currently feel about the following?
 [Percent respondents who say they are "somewhat concerned" or "very concerned"]

National sample, N1 = 19,505 (4/16/2020-4/30/2020), N2 = 20,333 (5/2/2020-5/15/2020), N3 = 18,132 (5/16/2020-5/31/2020)

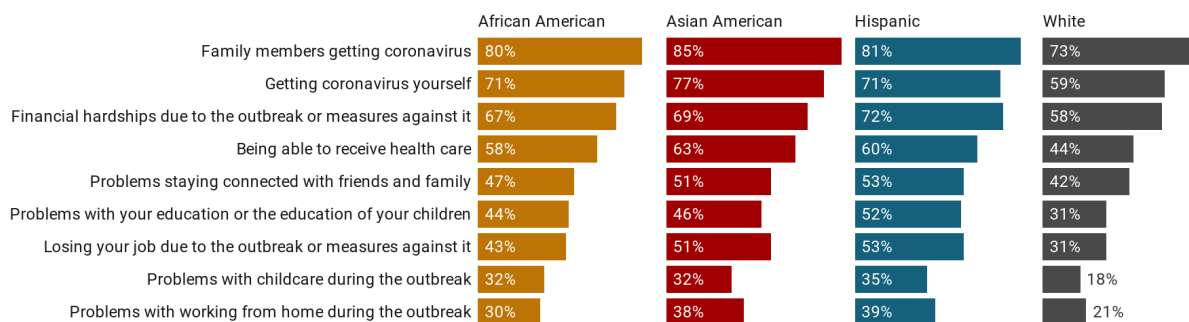

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

3.1 Concerns across social groups

Concerns about health, financial stability, job loss, and education are all higher among non-White respondents. Our data reflect the fact that communities of color across the country are disproportionately affected by both health and economic problems related to the pandemic. The proportion of respondents worried about getting the virus is at least 12 points higher for other groups compared to White Americans. Less than a third (31%) of White respondents said they are "somewhat" or "very" concerned about losing their job, compared to over half of Hispanic (53%) and Asian Americans (51%), and 43% of African Americans. The proportion of people who say they are concerned about education and childcare, as well as access to healthcare, is between 13 and 21 points higher among non-White compared to White groups.

All concerns about COVID-19 are higher among non-White Americans

How concerned, if at all, do you currently feel about the following?
 [Percent respondents who say they are "somewhat concerned" or "very concerned"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Partisan differences in concerns over COVID-19

How concerned, if at all, do you currently feel about the following?
 [Percent respondents who said they were "somewhat concerned" or "very concerned"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Apprehension about the pandemic is also uneven across party lines. **A higher percent of Democrats compared to Republicans say that they are “somewhat” or “very” concerned in every category we asked about.** Differences are especially large in concerns about getting the virus (75% of Democrats are “somewhat” or “very” concerned, compared to 52% of Republicans), family members getting sick (20 point gap) and access to healthcare (18 point gap).

3.2 COVID-19 and mental health

In this wave of the survey, we include a screen for major depression commonly used in primary care settings. Nationally, 27% of respondents describe symptoms in a range that would be considered moderate or severe depression. These numbers vary widely by state, from 20% and less (Montana*, Minnesota, Wyoming*) to more than 30% (Kansas*, Arizona, Missouri, Nebraska*, Louisiana, West Virginia*, California, Rhode Island*, and Mississippi*).

Once again, we observe some partisan differences, from 23% of Republicans to 28% of Democrats and 27% of independents. Moderate or greater levels of depression are more common among those who say their lives had been disrupted “a great deal” by COVID-19 (42%), compared to just 19% among those who report that their lives have been disrupted “a moderate amount” or less.

Levels of depression are more than 3 times what has usually been observed in large U.S. surveys like the [National Health and Nutrition Examination Survey](#): rates of moderate or greater depression were about 8% between 2013 and 2016.

Americans with moderate to severe depression symptoms

Percent respondents in each state who described symptoms in a range that would be consistent with moderate or severe depression using the PHQ-9 depression questionnaire.

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
• Created with Datawrapper

3.3 Government financial relief

In March 2020, Congress passed a 2.2 trillion dollar stimulus package called the CARES Act, supposed to provide financial relief to Americans affected by the coronavirus pandemic. In our late May survey, we asked respondents whether they had received their stimulus payments. **A total of 67% among them reported that someone in their household had received a payment from the coronavirus stimulus program.** Another 9% had received a notification but not a payment, while 24% did not receive either.

The chances of receiving a stimulus check differed across social groups. **Over 73% of White participants in our survey got a financial relief payment, compared to 57% of African American, 55% of Asian American, and 56% of Hispanic respondents.** Those differences could stem from lower access to banking among non-White Americans, forcing them to wait longer for a check in the mail rather than receiving a bank account transfer.

Women (72%) were more likely than men (62%) to say a stimulus payment was received in their household. Payments were also more commonly reported by Republicans (72%) compared to Democrats (67%) and independents (64%). **People whose households received stimulus relief were more likely to say they would support¹ Donald Trump in the 2020 election (37%) than their counterparts who did not get a payment (29%).**

Stimulus payment received by race and gender

Did you or a member of your household receive a stimulus payment from the coronavirus stimulus check program enacted as part of the CARES Act?

[Percent respondents who say "yes"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

• Created with Datawrapper

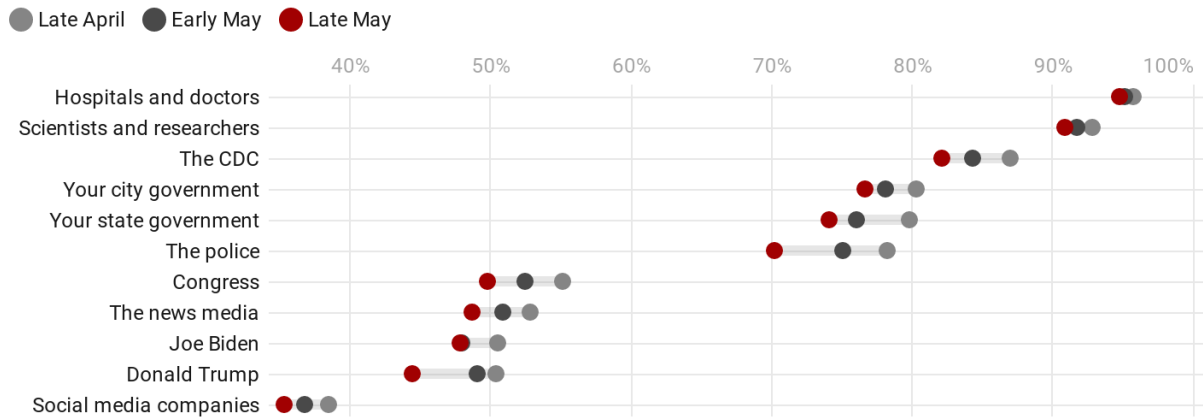

4. Trust in government and the police

As the crisis deepens, Americans' trust in institutions to handle the pandemic is beginning to fray. Trust in all institutions and political figures we asked about dropped in this period. Confidence in medical professionals and scientists remains extremely high, with over 90% of respondents saying they trust those groups "some" or "a lot", a less than a 2 percentage point drop in trust over the last month. We find a larger, 6 percentage point decline in trust for state governments and Donald Trump over the month of May.

¹ These measures of support include respondents who have a candidate preference but are not planning to vote in November.

Trust in individuals and institutions to handle the COVID-19 pandemic

How much do you trust the following people and organizations to do the right thing to best handle the current coronavirus (COVID-19) outbreak? [Percent respondents who say "some" or "a lot"]

National sample, N1 = 19,505 (4/16/2020-4/30/2020), N2 = 20,333 (5/2/2020-5/15/2020), N3 = 18,132 (5/16/2020-5/31/2020)
 Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

4.1 Trust in the police

The largest decline in public trust we observed was for the police: a significant drop of 8 percent points from 78% in late April to 70% in late May. Even though the survey question we posed to respondents focused more narrowly on trust in institutions to handle the pandemic, this decline is likely at least partly due to the death of George Floyd and subsequent events. In the last few days of May and the beginning of June, public attention focused on police brutality against African Americans, as well as on concerns about the way police departments in many large cities have handled recent protests.

Our data collection for the latest wave of this 50-state survey started on May 16 and was completed on May 31. We examined the responses given before the protests started (May 16-26, N=12,398) and compared them to those collected after the beginning of the protests (May 27-31, N=5,734). Prior to the protests, 72% of respondents said they trusted the police to handle the pandemic, while afterwards that number was 66%. In the last few days of our data collection (May 29-31, N=3,259) when the protests spread across the U.S., 64% of respondents said they trusted the police "some" or "a lot".

Trust in the police in the second half of May is lowest among African Americans, with 54% saying they have "some" or "a lot" of trust compared to 75% of White respondents, 65% of Hispanic respondents, and 73% of Asian American respondents. There are also prominent distinctions among age groups.

Only 55% of Americans age 18 to 24 report trusting the police, compared to 64% for ages 25 to 44; 76% for age 45 to 64; and 83% for those 65 and older. Numbers also differ across party lines, with 79% of Republicans and 68% of Democrats saying they trust the police.

Trust in the police to handle the COVID-19 pandemic

How much do you trust the following people and organizations to do the right thing to best handle the current coronavirus (COVID-19) outbreak? - The police [Percent respondents who say "some" or "a lot"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

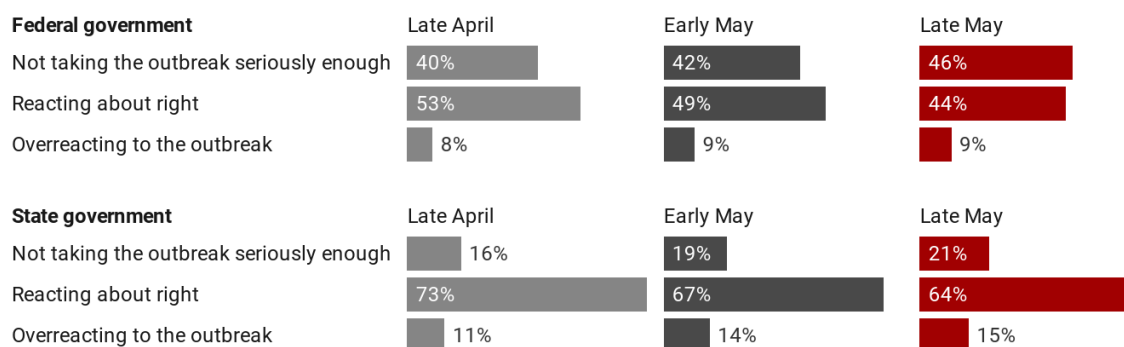

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

4.2 Trust in government

Overall, 64% of respondents say their state government's reaction to the outbreak is about right, while 15% think the state is overreacting, and 21% say the crisis needs to be taken more seriously. A considerably larger number, **46%, think the federal government is not taking the pandemic seriously enough.** This represents a 6 percentage point increase over the last month.

Reaction to the outbreak at the federal and state level

Thinking about how different people and groups are reacting to the coronavirus (COVID-19) outbreak, how would you say each of the following is reacting?

National sample, N1 = 19,505 (4/16/2020-4/30/2020), N2 = 20,333 (5/2/2020-5/15/2020), N3 = 18,132 (5/16/2020-5/31/2020)

Trusting Donald Trump to handle the pandemic

How much do you trust the following people and organizations to do the right thing to best handle the current coronavirus (COVID-19) outbreak? - Donald Trump
[Percent respondents who say "some" or "a lot"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
• Created with Datawrapper

Trust in state governments to handle the COVID-19 pandemic varies widely across the country. At the low end, **fewer than 65% of respondents in Georgia, Idaho*, South Dakota*, and Oklahoma say they trust their state government “some” or “a lot.”** We find the highest levels of trust (85% and more) among respondents in Vermont*, Massachusetts, New Hampshire, and Maryland.

Donald Trump is trusted to handle the health crisis “some” or “a lot” by 45% of Americans. Public confidence in the President is highest (55% or higher) in North Dakota*, South Carolina, Mississippi*, Arkansas, West Virginia*, Alaska*, and Wyoming*. Conversely, fewer than 35% of respondents in Rhode Island*, Hawaii, Vermont*, D.C.*, New Hampshire, and Washington say they trust the President.

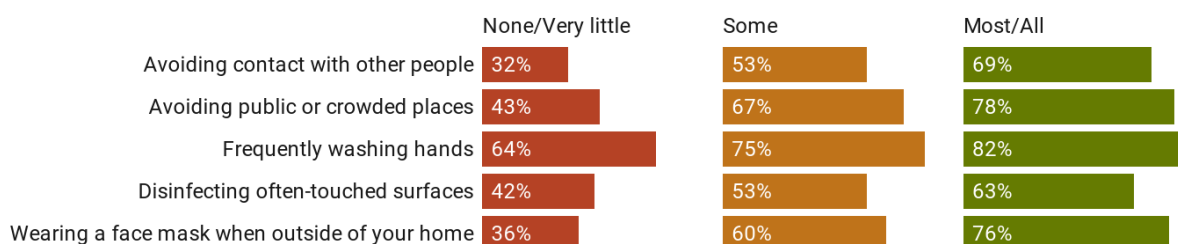

5. Information and misinformation about COVID-19

Most Americans continue to pay attention to media coverage of the pandemic, with 83% saying they follow the news about COVID-19 “somewhat” or “very” closely. Less than half of respondents (44%) report talking to people about COVID-19 at least once a day, a drop of 11 percentage points compared to the same number a month earlier (55%).

Americans also differ in their attitude towards the information they encounter. About **41% believe all or most of the information they see about COVID-19 is accurate or trustworthy.** Confidence in this information is closely related to behavior: the high-confidence group is over 30 percentage points more likely to wear masks consistently or maintain social distancing, compared to those who say “none” or “very little” of the information is accurate.

Americans who think COVID-19 news is mostly accurate are much more likely to follow health guidelines

In the last week, how closely did you personally follow the health recommendations listed below? [Percent respondents who say “very closely”] BY In general, how much of the information you see about the coronavirus (COVID-19) outbreak do you think is accurate or trustworthy?

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public’s Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

5.1 Information sources

Local television remains the most important source of COVID-19 information, with 50% of respondents saying they got news about the pandemic from it in the 24 hours before completing the survey. Local TV is followed closely by conversations with friends and family (46%), Facebook (45%), and network TV (43%).

Sources of news and information about COVID-19 by party

In the last 24 hours, did you get any news or information related to the current coronavirus (COVID-19) outbreak from the following sources? [Percent respondents who selected each source]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Not surprisingly, partisan differences emerge in the sources people rely upon for COVID-19 information. Close to half of Republican respondents (49%) rely on Fox News for coverage of the pandemic, while Democrats are more likely to go to CNN (48%). Facebook is used by close to half of the respondents from both parties, but Twitter and Instagram use is slightly higher among Democrats.

Young people rely on their social networks for COVID-19 information — both talking to friends and family (64%) and using social media (55%). Americans age 18 to 24 are especially likely to use YouTube (42%), Instagram (38%), and Twitter (28%). Older respondents over the age of 65 are getting their information from television, with 66% saying they watch COVID-19 news on local TV, 56% on network TV, and 45% on cable TV.

Sources of news and information about COVID-19 by age

In the last 24 hours, did you get any news or information related to the current coronavirus (COVID-19) outbreak from the following sources? [Percent respondents who selected each source]

Sources are sorted in order of their overall popularity among all Americans.

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

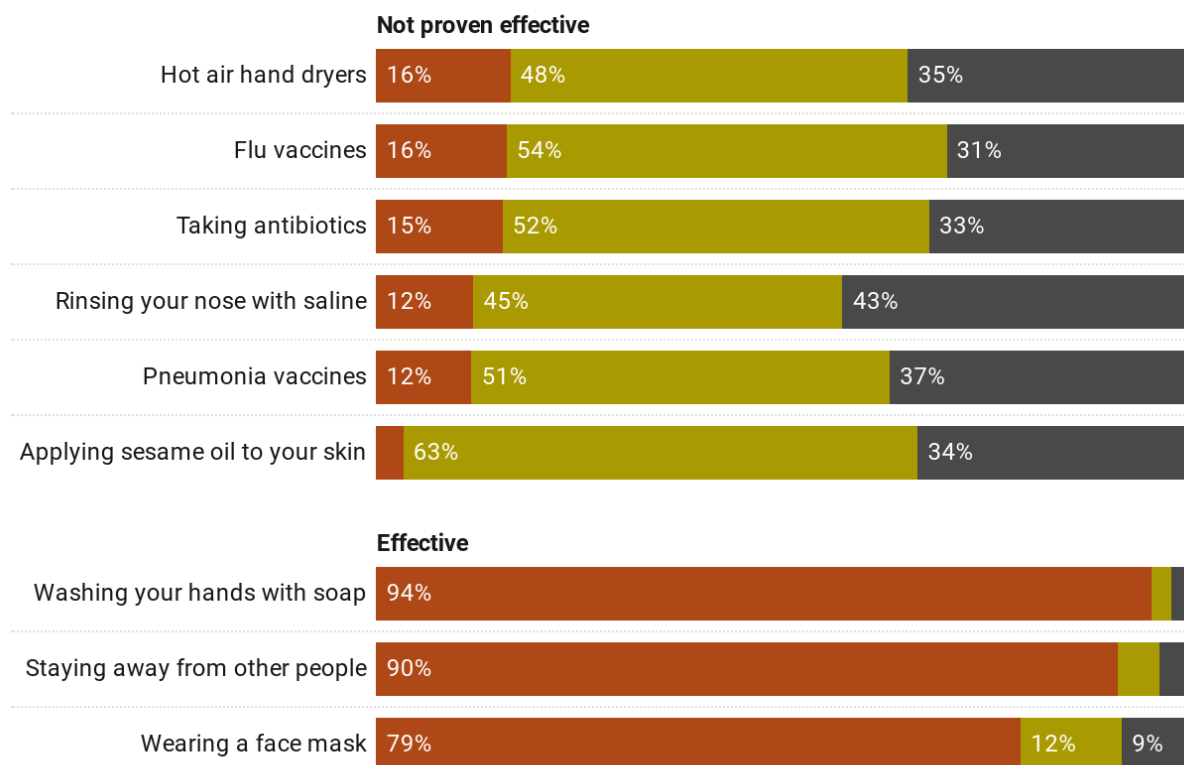

5.2 Misinformation and misperceptions

To understand the prevalence of misperceptions and misinformation about the COVID-19 pandemic, our survey asks a series of questions evaluating the relevant knowledge and beliefs of Americans during this crisis. **Results show that there is still a considerable uncertainty about measures that could be used to protect us from a COVID-19 infection.** A relatively low number of respondents (under 16% in each case) endorsed the effectiveness of medically unproven measures that have been popular on social media, including flu and pneumonia vaccines, antibiotics, saline wash, hot air hand dryers, and sesame oil. However, about a third or more of Americans were still uncertain about the usefulness of each of those measures. Some uncertainty remained about actual recommended measures as well, with 21% of respondents doubting or denying the effectiveness of wearing a face mask.

COVID-19 prevention: measures and myths

To the best of your knowledge, are the following ways of preventing a coronavirus (COVID-19) infection effective or not?

Effective Not effective Not sure

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Non-white Americans who are already more heavily affected by the crisis are also at a disadvantage when it comes to having accurate information on ways to prevent COVID-19. For every unproven preventive measure listed in the survey, misperceptions are higher among African American and Hispanic respondents than they are among Whites.

The gaps between non-White and White Americans were largest regarding the effectiveness of flu vaccines and antibiotics, neither of which is helpful against COVID-19. White respondents are also generally less likely to say they were uncertain about the right answer.

COVID-19 prevention misperceptions differ by race

To the best of your knowledge, are the following ways of preventing a coronavirus (COVID-19) infection effective or not? [Percent respondents who say "effective"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

Age was another relevant factor, with young people (18 to 24) more likely than other groups to endorse several ineffective preventive measures, including flu vaccines and antibiotics.

COVID-19 prevention misperceptions by age group

To the best of your knowledge, are the following ways of preventing a coronavirus (COVID-19) infection effective or not? [Percent respondents who say "effective"]

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 • Created with Datawrapper

In addition to exploring misperceptions about COVID-19 prevention, we also asked respondents about the accuracy of several coronavirus myths spreading on the Internet that have been debunked by researchers. **A fifth of Americans hold the popular but false and potentially dangerous opinion that only older people are at risk for coronavirus.**

Other popular debunked beliefs include the idea that COVID-19 was developed as a bioweapon in a Chinese lab (19%) or that humans first got coronavirus by eating bats (17%). **Uncertainty was very high regarding messages from the White House: less than half of the respondents were sure that Donald Trump had not announced plans to declare martial law in the U.S.**

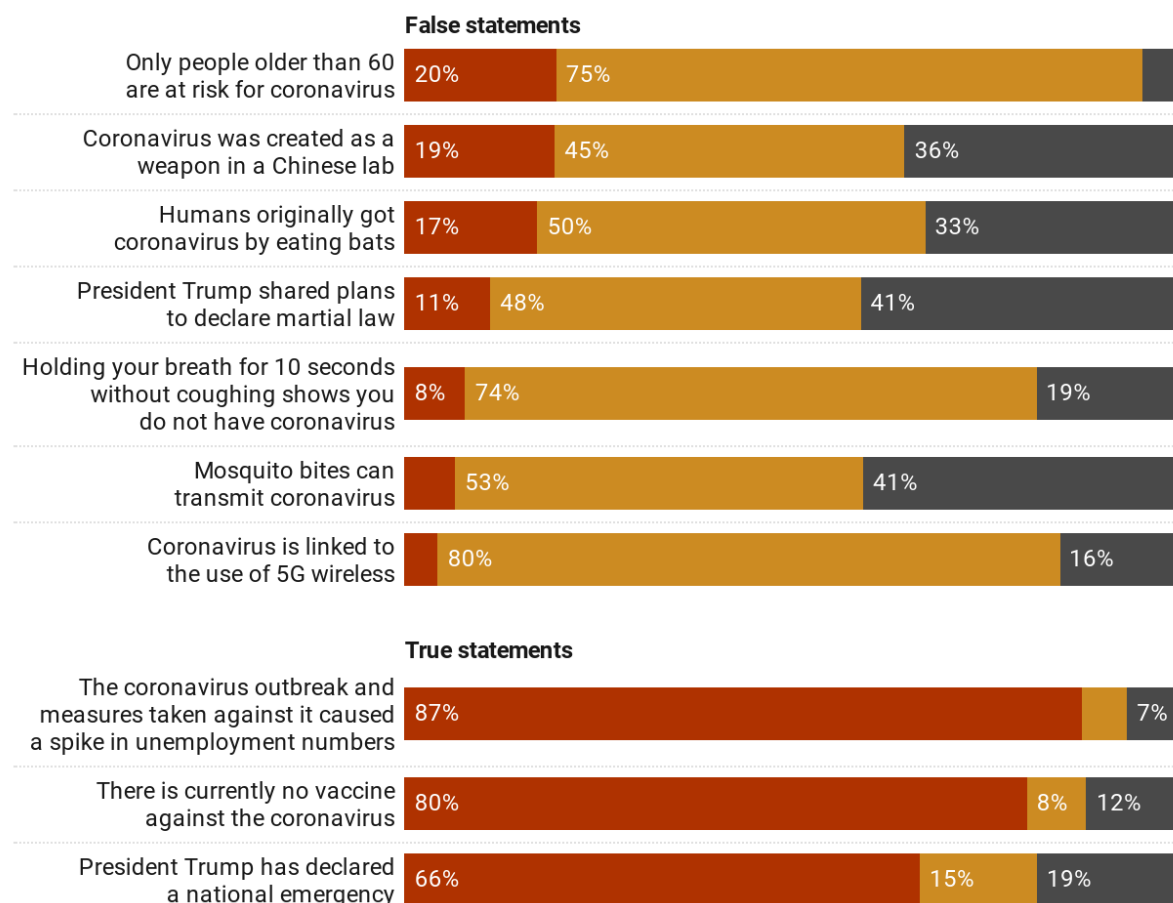

COVID-19 fact or fiction: pandemic misinformation

Below are some statements about the current health crisis.

To the best of your knowledge, are those statements accurate or inaccurate?

[Statements are presented to respondents in random order]

■ Accurate ■ Inaccurate ■ Not sure

National sample, N = 18,132, Time period: 5/16/2020-5/31/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org

• Created with Datawrapper

Some false claims also had significant political resonance. **The largest partisan gap in our data emerged around the idea that China developed COVID-19 as a biological weapon. Close to a third of Republicans (31%) said that was accurate compared to only 13% of Democrats.**

COVID-19 misinformation by party

Below are some statements about the current health crisis.
 To the best of your knowledge, are those statements accurate or inaccurate?
 [Statements are presented to respondents in random order]
